

ACT Clean Technologies, Inc. Signs Contract With Texas Oil Group To Use Oil Well Enhancement Fluid In Water Flood Project In Austin Chalk

May 28, 2010 – Huntington Beach, California – Marketwire –

ACT Clean Technologies, Inc. (Stock Symbol: [ACLH](#), Web Site: www.ACTCleanTech.com) announced today that it has entered into a Joint Venture Agreement, whereby ACT's wholly owned subsidiary, American Petroleum Solutions, Inc. (APS), will supply its Oil Well Enhancement Fluid for a new water flood project in Texas.

Terms of the agreement were not disclosed; however, APS will be paid for its fluids and labor and ACT will retain an interest in each well as reworking is completed.

William Anderson, President of American Petroleum Solutions, Inc., stated,

"We are excited about the opportunity that the joint venture partners, including Weekley Energy Group I, LP and its General Partner, Left Behind Recovery LLC, are giving us. They will be using our fluids in the water flood process with the intent of providing increased oil production over a longer period of time."

"Results of the project will be announced when the reworking of the first set of wells is completed."

Glenn Andrews, President of Left Behind Recovery LLC, said,

"Most wells in the area and formation that we will be water flooding will produce from eight to ten barrels a day and drop off from that over the next eighteen months and, then, we go through the same process again. We are always seeking new improved technologies with the hope of increasing production."

"We believe that the Oil Well Enhancement Fluid provided by American Petroleum Solutions, Inc., and ACT Clean Technologies, Inc., will increase our daily production and extend production for a longer period of time. Even though APS fluids are not new to the task of cleaning up hard surfaces, oil tanks, oil spills, etc., their use in an oil field water flood project is a potential innovation in the effort to expand production of existing, domestic oil wells. We look forward to working with APS and ACT now and in the future."

About ACT Clean Technologies, Inc.

ACT Clean Technologies, Inc. and its wholly owned subsidiary, American Petroleum Solutions, Inc., (APS) are committed to both a safer environment through cleaner technologies as well as more profitable methods of oil recovery and production from oil sands and other petroleum reserves.

Our wholly owned subsidiary, American Petroleum Solutions, Inc. provides oil field and heavy construction remediation services for projects complicated by environmental, regulatory, and other issues. Our experience ranges from soil remediation to complex, petroleum services related projects throughout North America.

American Petroleum Solution's patented fluidizer's approach to liquefying, and removing solidified crude oil sludge, offers significant cost savings and added value, when compared to standard industry methods.

Our fluidizer technology only increases the total volume of the waste material by approximately 15%-25% of the original volume as compared to a 300% plus increase generated by standard methods.

Our fluidizer allows waste oil sludge to be processed at the clean-up site, reclaiming the viable oil for further refining, or use as a valuable salable product instead of a costly hazardous waste.

Previous APS clients using its technologies have already included some of the largest oil and gas companies in the US, including:

**Conoco Phillips, Exxon Mobil, Avon Petroleum, Valero Petroleum,
BP (British Petroleum) and the US Navy Petroleum Reserve**

Founded by engineering professionals with environmental construction and remediation engineering backgrounds, APS provides our clients the benefit of a combination of practical solutions and technical experience in working with hazardous substances that are unique to the construction and remediation industry.

The senior management of the company has past major project experience including: Mobil Oil's Torrance Refinery, Southern California Gas Company, Southern California Edison Company and the Long Beach Unified School District.
